

DEMO MOTOR CLAIMS | EVIDENCE AND WORKFLOW | POLICY DIC-PC-0091273 | SY

This fictional workflow reference supports synthetic testing and is not a service agreement.

Required submission facts: policy number, loss type and description, incident date, incident location and six-digit PIN, garage estimate, and up to three vehicle photographs.

A reviewer can request information, investigate, approve an eligible settlement, or reject an excluded claim. Every agent result, rule outcome, reviewer action, and simulated payout must be recorded in an audit history.

Automatic synthetic settlement is allowed only when all deterministic eligibility checks pass, the garage estimate is no greater than INR 50,000, risk and fraud scores are each strictly below their configured thresholds, and the calculated payout is positive and within policy limits.

Amounts above INR 50,000, threshold equality or exceedance, missing evidence, conflicting facts, invalid synthetic payout profile, excluded or uncertain coverage, or LLM uncertainty requires human review. An LLM may extract facts and explain cited policy text but cannot change scores, rules, limits, or payee authority.
